Eventually your body's oils, sweat, skin cells; they get into your headset forever, the ear pads become soft and mush friends... Eventually your body is a standard to the sta away... At Wicked Cushions we say "hell no" to crushed dreams. We are here to help you up your game, focus on what's important, and save a bundle of cash at the same time. Instead of spending 170\$ on a new gaming headset, let us show you how to replace your old damaged Steelseries Arctis 7 Ear Pads with some Wicked new and upgraded Steelseries Arctis 7 replacement Ear Pads. We know what everyone experiences after prolonged use of their ear pads, so we don't just offer quicky replacements. We've improved the comfort, sound, and durability of our SteelSeries Arctis 7 replacements. and using higher grade memory foam than the original pads. Trust us, and soon enough you'll be on stage high fiving your teammates as you hoist the LCS trophy...Ready to give it a go? Let's walk through replacing your teammates as you hoist the LCS trophy...Ready to give it a go? Let's walk through replacing your teammates as you hoist the LCS trophy...Ready to give it a go? Let's walk through replacing your teammates as you hoist the LCS trophy...Ready to give it a go? Let's walk through replacing your teammates as you hoist the LCS trophy...Ready to give it a go? Let's walk through replacing your teammates as you hoist the LCS trophy...Ready to give it a go? Let's walk through replacing your teammates as you hold the earped with two fingers from within, and slowly pull it out of its socket. Make sure to remove both sides before moving on. Don't you wish reaching challenger was this simple?!? Stage 2 - Know where you are on the map at all times]! While there is no set left or right ear pad, our replacement Arctis 7 ear pads do have a top and bottom. Look for the seam on the ear pad and you've found your bottom, make sure you do this for both the left and right ear pad for a clean install. Stage 3 - Engage the enemy !Time to show your headset whos in charge. Let's get suited up with your pointer finger inside the ear pad so you can direct it easily. You're going to start from the top by inserting the backside lip of the ear pad into the slot on the headset. Once a part of the backside lip is on the inside, you need to stretch the rest of the backside lip will follow into the slot. Once it is on completely twist the ear pad a bit to secure it in place. Make sure to repeat all these steps for both ear pads... Just like that, you're done, your headset won't know what hit it... But you'll know exactly what happened. You just jumped from Iron to Masters in 5 minutes. Full Video: How to Replace Your SteelSeries Arctis Ear PadsIf the steps above are unclear without seeing a full demonstration, you're in luck! Check out the video we made for detailed step by step instructions. This guide is an approved headset cleaning method from our product team to keep your gear free of dirt and grime. Entering the new year, we remain connected at home more than ever. Whether that's for work meetings or long Discord hangouts, chances are your headset could use some maintenance. You may not think about it much, but your headset is likely one of the dirtiest peripherals you use on a daily basis. Hours of sweaty moments, clutch plays, and stressful teammates can all build a lot of crud on your earpads. Luckily, gaming headsets are not very difficult to clean. Here's how: You will need: A bit of mild dish soap mixed into warm water (not too foamy)BrushMicrofiber clothQ-tipSteps:If you have removable earcups, carefully remove them from the headset. Wipe away grime on your headset by working in to your headset. Wipe away grime on your headset by working in the water. Dip the cloth in the wate gentle circles. If your Arctis has one, you can remove the adjustable headband and wash it by hand or throw it in the wash, then let air dry before reattaching to the headset. For the removeable earpads, the cleaning methods differ by material: Leather: Carefully wipe with a moist microfiber cloth and let fully dry before reattaching them to the headsetVelour: The material for these can be tricky to clean, but all you need is some tape. Rub the earpads together in circles in order to displace and push any lint together. Use some sticky tape to pluck all the lint out of the pads. If your velour pads are on the sweaty side, soak them in a warm water solution with a bit of soap. Squeeze out remaining moisture and allow to dry completely before reattaching the headsetAirWeave or Mesh: Gently remove the cover from the inner foam material. Wash the AirWeave or mesh with warm, soapy water, and allow to airdry completely before reattaching the foam. Done! Repeat as often necessary, and enjoy your clean headset. Note: While we don't recommend them, if you do choose to use sprays, wipes, or any other cleaning and disinfecting products on your equipment, please carefully read all labels to ensure safe and correct use for both your belongings and your gear free of dirt and grime. Note: While we don't recommend them, if you do choose to use sprays, wipes, or any other cleaning and disinfecting products on your equipment, please carefully read all labels to ensure safe and correct use for both your own health.Read More: soo i have my hd 451 for about 4 months and my room's ac was under service soo i sweat alot and now my earpads smeels like shit , so how do i clean them? 0 You could use unscented baby wipes to wipe the ear pads clean if they don't come off. Make sure they do not contain any skin conditioner like aloe. If the ear pads do come off you can clean them in water with a small amount of liquid laundry soap, let them air dry and then put them back on the headset. A google search yielded this result: 0 You could use unscented baby wipes to wipe the ear pads clean if they don't come off. Make sure they do not contain any skin conditioner like aloe. If the ear pads do come off you can clean them in water with a small amount of liquid laundry soap, let them air dry and then put them back on the headset. A google search yielded this result: 0 Option 1: Hand clean with soap and water Option 2: Ask you mom/sister* to wash with their "delicates", usually in a special cloth bag and special washer/dryer setting. Request no perfume or extra stuff. *Make sure they do not contain any skin conditioner like aloe. If the ear pads do come off you can clean them in water with a small amount of liquid laundry soap, let them air dry and then put them back on the headset. A google search yielded this result: can i use detergent instead? 0 I would make sure it was as mild as possible and make sure it gets diluted in the water well. You may need to use very water to get it to dissolve if its a powder. If you do use hot water to get the soap to dissolve then give it 15 minutes to cool so you can comfortably put your hands in the water on it or you'll be right back here asking us whats the best replacement for the unit. 0 I would make sure it was as mild as possible and make sure it gets diluted in the water to get it to dissolve then give it 15 minutes to cool so you can comfortably put your hands in the water before cleaning your ear pieces. Just a reminded make sure the headset its self does not get any water on it or you'll be right back here asking us whats the best replacement for the unit. ow k thx the ear cups i replaceable soo dont need to worry about that 0 0 if they are old and really bad (such as being hard from sweat) you could just get replacement pads... not sure how well the foam will do in hot water or dryer. if you do wash them i'd do it by hand. honestly a little febreeze or similar would likely be fine instead. thx for the suggestion but it's only about 4-5 months old soo no need to be replaced Page 2 Title. The corsair STRAFE red LED keyboards as well Because they look cool and can match their machine lights etc, some people go for looks as well. Other thing is, when you are playing in darkness you can see your buttons. You can customise the leds to only light buttons used in game, this makes functions clearer Page 3 hello, i am planning on buying a Cooler Master CM Storm Octane Gaming Bundle, but i have one slight problem, i live in belgium and i use azerty (wich i absolutely hate because i can't type on a qwerty keyboard and basicly every country in the world uses qwerty) and the Cooler Master CM Storm Octane Gaming Bundle looks like a really good combo, but it's qwerty, and i know you can buy stickers to change that but the letters are in the middle of the keys, and the letters on those stickers are in the upperleft corner, and it is going to look very weird if i use the normal ones with the letters on the upperleft corner, and it is going to look very weird if i use the normal ones with the letters on the upperleft corner, and it is going to look very weird if i use the normal ones with the letters on the upperleft corner because 1. it's a backlit 2.as i said the keys are on the upperleft corner with those stickers and the keys on that keyboard are in the middle, does anyone know how to solve my problem? thanks already, greetings, Bob 0 its not quite as simple as swapping a->b given the locations of some symbols. you can get custom made keycaps for any cherry mx switch board such as but if you get a backlit board thats going to be a problem. a custom keyboard to begin with. total of 16 keycaps you would need to replace if you want an exact match from qwerty -> azerty given how different symbols appear on different symbols appear on different keys. 0 How do you solve it? Buy a keyboard with the layout you need, or get custom keycaps and hope it works properly. Stickers are a bad idea, they will fall off or gunk up the keyboard 0 do you know a site where you can buy keycaps? 0 okay, i'm just dumb, that keyboard is mechanical, so you can just change their position Yes, but some use position dependent shapes. If your keyboard keys are all the same size you're fine, if not you'll probably want new caps. 0 its not quite as simple as swapping a->b given the locations of some symbols. you can get custom made keycaps for any cherry mx switch board to begin with. total of 16 keycaps you would need to replace if you want an exact match from qwerty -> azerty given how different symbols appear on different keys. 0 its not quite as simple as swapping a->b given the locations of some symbols. total of 16 keycaps you would need to replace if you want an exact match from qwerty -> azerty given how different keys. symbols appear on different keys. He should be happy that it's only 16, converting from qwerty to japanese keyboard is actually impossible without adding three extra keys (not keycaps) and replacing pretty much all the keys except F keys, esc, page control, arrows and number pad! 0 i use the translate bar and enter romaji to auto push to katakana/hiragana/kanji when i need to enter japanese on my qwerty. its possible to live in japan and do the same although a japanese keyboard is often more convenient. or, you can always add stickers to the front side of keys if you use full height keys and buy a blank das keyboard. that works too. Page 4 I use a hyper x cloud 2 that I got about 2 months ago. My friends have been complaining about a crackling popping noise through my mic. I listened to myself on my computer and my ps4 and heard the noise only when I move the cable. How do I fix this. 0 Hello... You could have a bad wire in your cable or connector... you could return/RMA them after 2 months? Page 5 1 Cherry mx keyboards are the most common, and best in terms of typing feel for most people, there are exceptions. The razer keys are just knockoffs of the cherry keys, and the roamer gs are a cheaper to produce but high quality, they feel different to type on. Brand doesnt make much difference with keybaords, it is all about the switches and features. I recommend the quickfire rapidi from coolermaster, as it has a nice design and led backlighting, as well as being driverless and nkrollover if you care about those features. It is a great little keyboard (built like a tank!) 0 If you are used to the Logitech keyboard, I recommend you to stick with the brand. The Corsair is a good choice too, I've read good reviews from the full sized version of that keyboards are the most common, and best in terms of typing feel for most people, there are exceptions. The razer keys are just knockoffs of the cherry keys, and the roamer gs are a cheaper to produce but high quality, they feel different to type on. Brand doesnt make much difference with keybaords, it is all about the switches and features. I recommend the quickfire rapidi from coolermaster, as it has a nice design and led backlighting, as well as being driverless and nkrollover if you care about those features. It is a great little keyboard and quite cheap for a very high quality keyboard (built like a tank!) 0 I went with the Razer BW Tournament in Orange which are basically browns and closest to my G710+. Thanks. Page 6 Right now I'm using an old Razer Blackwidow 2012 keyboard mainly for editing images and videos (an editing shop) and gaming in between. I have entered the problem where my Blackwidow cant keep up with my macro profiling anymore (only 5 macro keys and I dont want to set the normal letters to macros). I'm planning to get a new keyboard + gaming keypad OR a keyboard with loads of macro keys. I dont want to move my left hand a lot cause it wastes time on my cutomers' editing requests. I have two choices: 1. Blackwidow Chroma + Orbweaver Chroma 2. Corsair K95 The Razer combo looks sick and is more of my preference. The Corsair gets the job done and cheaper than the combo, but doesnt have blues (which I LOVE) So, any thoughts on which I should get? Preferably from Razer or Corsair. I dont really like the appearance of Logitechs (although it's the most suitable for my job). Thanks! 0 Did you mean cherry mx blue switches or blue lighting? The cherry switches. I do know that they sell those, but its not available in south east asia. Page 7 I've been reading around in forums that I can find in Google. I understand that I would need an amp to power up the speakers. But how would I connect my PC to the amp? Do I need to purchase any more equipment? Please give links to some hardware, I'd prefer it all to be under \$100. 0 if you do not plan on listening at high volume levels you might be able to make use of a cheap amplifier. build quality is generally poor, they lack much output power and they tend to distort if you turn the volume up higher but if you just want to get a taste then that may be the route. you can certainly find some products in the 20-50 range which will work for giving you a taste if thats all you want. if you intend to upgrade eventually it may be worth spending a bit more and getting something a little nicer but thats on you to decide. 0 0 Sorry, I'm a noob when it comes to the audio stuff. Can you give me links to the things that I need to buy? 0 Your PC should have built-in "line-level" audio outputs. All you need is a 3.5mm to RCA plug cable to connect to most amplifiers. Another option is to use a coax or optical SPDIF connection if your on-board audio and amplifier have that. 0 Your PC should have built-in "line-level" audio outputs. All you need is a 3.5mm to RCA plug cable to connect to most amplifiers. Another option is to use a coax or optical SPDIF connection if your on-board audio and amplifier have that. Check out this pyle mini amps. It should do the job. If the wattage isn't high enough they make more powerful mini amps. sr_1_47?ie=UTF8&qid=1460242415&sr=8-47&keywords=2+channel+amp Okay, so you're both saying that I don't need a receiver, right? Just an amp with a RCA to 3.5mm jack or an optical cable? 0 This really depends on the amp or receiver that you are using to drive the speakers. Generally you can just use a cable like a 3.5mm to dual RCA like this: . . . That should plug right in to most small amps and receivers. There are many ways to accomplish what you are trying to do and it really depends on the gear you have on how you would want it connected. Edit: Yes, you can use an Amp with RCA inputs and then a cable like the one I linked. 0 This really depends on the amp or receiver that you are using to drive the speakers. Generally you can just use a cable like a 3.5mm to dual RCA like this: . . . That should plug right in to most small amps and receivers. There are many ways to accomplish what you are trying to do and it really depends on the gear you have on how you would want it connected. Edit: Yes, you can use an Amp with RCA inputs and then a cable like the one I linked I found a cheaper amp with better reviews. I want to buy the LP-2024A+ one. Would this just be strictly for cars? I read from one of the reviews that they have the same specification. 0 @zeus it would this just be strictly for cars? output and impedance they are rated for. do you need a receiver? no. this can be handy if you have multiple sources or are needing a stronger amplifier but we will cross that road if we need to once you list your model numbers. in most cases you can get a nice little amplifier to power bookshelf speakers just fine. a nice little amp would be the dta-120. we have it hooked up in the other room with a pair of HK thirty bookshelf speakers and it is excellent. the lepai 2020+ is a good cheap amp if you have fairly low power bookshelf speakers and it is excellent. for, remember that. just want an amp? hook up to it via a standard 3.5mm to rca cable (for rca input model. or 3.5mm to with A) what equipment you have and B) if the pc will be the only input device. 0 @zeus it would be in your best interest if you post what speakers (brand and model) you will be connecting to the pc or at minimum what wattage output and impedance they are rated for. do you need a receiver? no. this can be handy if you have multiple sources or are needing a stronger amplifier as sometimes its cheaper just to buy a receiver than a strong amplifier but we will cross that road if we need to once you list your model numbers. in most cases you can get a nice little amplifier to power bookshelf speakers just fine. a nice little amplifier but we will cross that road if we need to once you list your model numbers. of HK thirty bookshelf speakers and it is excellent. the lepai 2020+ is a good cheap amp if you have fairly low power bookshelves although if you need more output its going to start distorting fairly early. you get what you pay for, remember that. just want an amp? hook up to it via a standard 3.5mm to rca cable (for rca input model. or 3.5mm to 3.5mm 3.5mm for ones with an aux in) out the rear of your pc (either onboard audio outputs or soundcard). if you have poor quality onboard audio (static, buzzing, etc) you can get a cheap external dac or internal soundcard). If you have poor quality onboard audio (static, buzzing, etc) you can get a cheap external dac or internal soundcard. It will be the only input device. Okay, I will keep you posted. I will be the only input device. you know what model of Pioneer it is when I get out of work. Just one more hour. 0 Okay, so I have two of these 0 full specs.. per the specs page Bass Reflex Design Magnetically Shielded for Video Applications Configuration: 3-Way Woofer - 8" cone type Tweeter - 1" semi-dome Nominal impedance: 8 ohm Frequency response: 40 Hz - 20KHz Sensitivity: 84 dB Maximum power: 160 Watts Dimensions: 97/8 (W) x 19 13/16 (H) x 11 3/4 (D) Weight - 15 lbs. 10 oz. ea. on something like the dta-120 you should be able to get into 95+db ranges for volume though thats maxed out and you might get distortion or clipping if you push it that hard. a small amp like this should be fine if you intend to only listen at low or moderate levels. (dta-120 outputs 40wpc @ 80hm) if you intend to have a broader range of volumes or high output you might want to get a stronger amplifier with higher wpc at the 80hm impedance load. you can get stereo receivers in 100-135wpc @ 80hm load for about 30-50 more than the dta. a bit limited but they would work. likewise you might be able to find dedicated amps however it might be hard to find one that is not a chinese low end product. the speakers are only average quality based on reviews - i'm not sure how much money in these. I just want to get started and upgrade in the future. These will just be my startup. 0 if you do not plan on listening at high volume levels you might be able to make use of a cheap amplifier. build quality is generally poor, they lack much output power and they tend to distort if you turn the volume up higher but if you just want to get a taste then that may be the route. you can certainly find some products in the 20-50 range which will work for giving you a taste if thats all you want. if you intend to upgrade eventually it may be worth spending a bit more and getting something a little nicer but thats on you to decide. 0 if you do not plan on listening at high volume levels you might be able to make use of a cheap amplifier. build quality is generally poor, they lack much output power and they tend to distort if you intend to upgrade eventually it may be worth spending a bit more and getting something a little nicer but thats on you to decide. Well what do you recommend I get? Of course I would want a little nicer for future upgrades down the road. Page 8 Hello, I want to buy a new monitor these days, and I narrowed my choice to two models. 1. Asus VX239H (maybe even MX239H, if it's really worth the price difference - 2. Samsung LS24D590PL (Now, mostly I play games (CSGO, LoL sometimes...), but I also do some web design and work in Photoshop and Lightroom, and I prefer IPS monitors. Also, my current job is done on the computer so I need a "not tiring for eyes" kinda option. Asus looks good, but the speakers are an unnecessary option for me. A lot of people said that the touch-sensitive buttons for settings can sometimes be a pain, while the Samsung also has a metal stand and looks very nice, but I wanted to check with you. For my needs, in terms of characteristics, price/value ratio and other stuff, which one would you recommend? I think that I can't go wrong with any of these two (three, if I count MX in), but I just want to be on the safe side. Right now I'm using a 10 year old LG W2243S monitor connected with a VGA cable to my GTX 760 card, and I would like to connect my new monitor with an HDMI cable. Page 9 Decided I would change my old Logitech m90 which I've been using for 3-4 years now. Its about 132mm long. I've done some research and the two mice I found these two; SS Rival (300) and Logitech g402. They look promising but I just cannot decide which one is the best. I've clearly checked the Deathadder but its way too small/short at 127mm. Any ideas? Thank you. 0 That would be best. It is hard to make a recommend just on the length of a mouse and how it fits your hand is more important. Let us know what you choose. Good luck! 0 I guess it depends on how you grip your mouse. Do you have the option of going to a local electronics store to try the feel of other mice? Veah I have a palm grip your mouse. Do you have the option of going to a local electronics store to try the feel of other mice? Veah I have a palm grip your mouse. trying some mice out. 0 That would be best. It is hard to make a recommend just on the length of a mouse. The curve of the mouse and how it fits your hand is more important. Let us know what you choose. Good luck!
